

## Highlights

- High-performance 10/40/100 Gigabit Ethernet Switch
- Flexible pay-as-you-grow semi-modular design
- Flexibly supports high-density 10 Gigabit, 40 Gigabit, 100 Gigabit, and Combination modules
- At home in both the Campus Core and as the Spine Switch in a Data Center Spine/Leaf Top-of-Rack deployment
- Efficient compact form-factor that reduces power and footprint consumption
- Supports both conventional Routed IP and/or Fabric-based network deployments
- Delivers high-end functionality, performance, and scalability while helping to avoid the traditional 'Chassis Tax'

## Extreme Networks Virtual Services Platform 8400 Series

Flexible, Compact Form-Factor Ethernet Switch designed to deliver sophisticated functionality in versatile deployment scenarios for businesses that range from mid-market up to mid-sized enterprises

Extreme Networks progresses the Compact Form-Factor Ethernet Switch concept with the introduction of a flexible, semi-modular option. An important pillar of the Virtual Services Platform 8000 Series, this Switch enables businesses to satisfy many typical deployments scenarios with a consistent hardware platform.

Mid-sized businesses are increasingly dependent upon application access and IT systems — much like their larger siblings — however they typically do not have the same levels of IT or funding resources available to build-out reliable networks using conventional techniques and products. They too seek advanced networking capabilities, but need these to be delivered in a streamlined, simplified, and cost-effective package.

The VSP 8000 Series features tight integration between the Industry's leading hardware and Extreme Networks' proven VSP Operating System and this delivers a compelling package of enhanced levels of functionality and robustness. Leveraging Extreme Networks' unique virtualization technologies, businesses can benefit from real-time service agility, avoiding the delays associated with conventional design, and the outages introduced in trying to maintain them. The Compact Form-Factor (CFF) design

revolutionizes the cost/benefit proposition for the mid-market/mid-sized Core Switch role; delivering higher port density, better price/port, lower entry price-point, enhanced power efficiency, reduced maintenance, smaller physical footprint, and easy scalability. Essentially, the CFF gives business what they need, and at the same time helps them avoid the 'Chassis Tax'.

The VSP 8000 Series debuted the Compact Form-Factor design concept, ushering in a unique approach to product and solution design. The original VSP 8200 Series has come to define simplification, and the VSP 8400 Series now adds flexibility to the equation. Leveraging the ability to support a diverse mix of Ethernet interfaces — from 10Mbps to 100 Gbps, Copper- and Fiber-based — businesses can use the VSP 8404C to address a range of networking applications. The VSP 8400 is equally at home in the Core of a mid-sized Campus network, or as the Spine Switch in a Data Center Spine/Leaf Top-of-deployment. The VSP 8400 can also be deployed as a Campus Distribution Switch, providing and aggregation point between the Core and Access tiers. Supporting Extreme Networks' innovative Fabric Connect and Switch Cluster technologies, in addition to conventional IPv4 and IPv6 Routing, the VSP 8400 is an agile and versatile player in a number of distinct scenarios.

The VSP 8400 deploys and operationalizes quickly, minimizes ongoing operational burden, and Extreme Networks' unique network virtualization technologies enable real-time service deployment. As a product line, the VSP 8000 Series enables businesses to redirect their finite IT resources to important value-adding projects.

The VSP 8400 shares the same next-generation hardware and software technology basis as the existing VSP 8200 Series. This positions the product line to support both today's requirements and tomorrow's emerging needs. The VSP 8000 Series provides business with a future-ready solution that leverages the Industry's most software-definable network virtualization technology.

## Product Overview

The VSP 8400 Ethernet Switch provides four front-panel slots that support the flexible deployment of high-density VSP 8400 Series Ethernet Switch Modules. By default, the VSP 8400 is a “zero port” system, with a Chassis that integrates the switching fabric and all associated control and management electronics. Ethernet interfaces are delivered by the addition of one or more field-replaceable and hot-swappable Ethernet Switch Modules (ESMs).

Extreme Networks has expanded the capability of the VSP 8400 Series with the introduction of the VSP 8404C 100G-capable Chassis. This variant features a new switching fabric that has been specifically optimized to support 100 Gigabit Ethernet and the companion 8402CQ 2-port 100 Gigabit Ethernet ESM. In every other respect, the new VSP 8404C Chassis is identical to the original VSP 8400: form, fit, and function; power and cooling, size and weight.

In this manner, the VSP 8400 provides a low-cost, pay-as-you-grow solution for mid-sized businesses that wish to retain a high degree of flexibility as they develop solutions for their networking requirements.

The VSP 8400 Series Ethernet Switch Modules are as follows:

- 8402CQ 2-port 100 Gigabit Ethernet QSFP28 ESM
- 8408QQ 8-port 40 Gigabit Ethernet QSFP+ ESM
- 8418XSQ 16-port 10 Gigabit Ethernet SFP+ and 2-port 40 Gigabit Ethernet QSFP+ Combo ESM
- 8418XTQ 16-port 10 Gigabit Ethernet RJ45 and 2-port 40 Gigabit Ethernet QSFP+ Combo ESM
- 8424XS 24-port 10 Gigabit Ethernet SFP+ ESM
- 8424XT 24-port 10 Gigabit Ethernet RJ45 ESM
- 8424GS 24-port Gigabit Ethernet SFP ESM
- 8424GT 24-port Gigabit Ethernet RJ45 ESM

It should also be noted:

- 8402CQ 100 Gigabit ESM is supported only in the VSP 8404C, not in the VSP 8400
- 40 Gigabit Ethernet QSFP+ ports support Channelization and can therefore be individual sub-divided into four 10 Gigabit Ethernet channels
- 10 Gigabit Ethernet SFP+ ports also support a wide range of 1 Gigabit Ethernet SFP Transceivers
- 10 Gigabit Ethernet RJ45 ports also support 100/1000Mbps connectivity

- Gigabit Ethernet SFP ports support a wide range of 1 Gigabit Ethernet SFP Transceivers
- Gigabit Ethernet RJ45 ports support 10/100/1000Mbps connectivity

Please refer to the product technical documentation for further details.

The innovative design leverages the most advanced chipset from the Industry's leading supplier, featuring 2.56Tbps of switching and 1,428Mpps of frame forwarding performance. The chipset is designed to deliver Terabit-scale, wire-speed capabilities, with a fully integrated, high-performance ASIC architecture that facilitates multiple design opportunities. Latency has been optimized, with a 40% advance over current best examples. New intelligent buffer technology self-tunes thresholds for excellent burst absorption, offering a 5x efficiency gain over existing static designs. A flexible, over-sized Unified Forwarding Table delivers enhanced support for L2, L3, and Multicast networking requirements. This chipset also includes embedded support for a range of enabling technologies such as DCB, SPB, VXLAN, PIM, FCoE, and NAT/PAT.

## Benefits

The VSP 8400 adds significant flexibility to the Extreme Networks portfolio, and is compatible with, and complementary to, existing products and technologies. A new product, introducing the Compact Form-Factor concept, the VSP 8400, when deployed with other Extreme Networks or third party Ethernet Switches devices, provides very high-capacity, high-performance connectivity solution for mid-sized Campus networks.

Building the Core using the cost-effective VSP 8400 and the Extreme Networks Switch Cluster technology enhances the resiliency posture normally available to mid-sized business. In addition to the various high-availability factors offered by expensive Chassis-based products (i.e. CPU, Switch Fabric, Power, Cooling, and of course Link), the combination of Switch Cluster and distributed hardware delivers total physical independent, including the ability to have the 'Core' split and deployed in different physical locations, independent and isolated control planes (meaning genuine process separation, isolation, and protection), and in-service software upgrades and be easily enacted. The VSP 8400 brings to the mid-sized Core the advantages that deploying Switch Cluster on Extreme Networks' Chassis-based products has delivered for many years to larger networks, but now offering it at a price-point more compatible with mid-sized business.

The VSP 8400 also natively supports the Extreme Networks Fabric Connect technology. Some of the key advantages that Fabric Connect delivers include:

- Making the need to configure network-wide VLANs obsolete
- Replacing multiple sequential legacy protocols with this one single unified technology
- Totally removing the risk of network loops
- Delivering the Edge-only provisioning model which seamlessly integrates with orchestration and automation
- Fully optimizing all links and all devices enabling businesses to get the most out of infrastructure investments

Traditionally, provisioning new services or to changing existing ones, requires engineers to touch every device in the service path, configuring each device to enable both the active and redundant links. The bigger the network the more complex and risky this becomes. Leveraging Fabric Connect to virtualize the network delivers fundamental change. Rather than the network appearing as a mass of individual devices it becomes an opaque cloud, where we only need to touch the single unique device that is providing service directly to the end-point. Fabric Connects automatically and instantly propagates all of service attributes to every other node within the cloud.

Fabric Connect has the added advantage of separating and segmenting traffic to unique service constructs. This has advantages in delivering 'stealth networking' solutions that help with compliance for business processes such as PCI and HIPAA.

Creating an autonomic network delivers crucial advantages. It means that businesses no longer need to configure the Core of the network for every service change; service change is only configured at the Edge of the network, and this has dramatic impacts for the entire change paradigm. Network segmentation means that each service is uniquely encapsulated and carried independent of every other service. Leveraging a single unified protocol, with integrated IP Multicast, enables Fabric Connect to deliver the Industry's premium solution for simplified, scalable, and resilient IP Multicast-based applications. The Edge-only provisioning model delivers significant advances in how the network interacts with VM mobility. Layer 2 VLANs can be easily and seamlessly extended throughout the Data Center whether that is a single site or multi-site, and traffic flows are automatically load-balanced across all available links.

## System Compatibility

The following major enhancements that were introduced in the VOSS 6.0 release are supported on the VSP 8404C platform running the VOSS 6.1 release.

- **Extreme Networks Distributed Virtual Routing (DvR).** This feature enhances IP routing for Fabric Connect implementations by fully optimizing both availability and performance of the IP Gateway functionality. When Layer 2 networks are stretched across the network - as might be the case for a dispersed Data Center or for a campus-wide WLAN deployment - it can be easy to end up in a situation where trans-subnetwork traffic is forced to double-back across interconnects. This problem is known as the "Trombone Effect". However, Extreme Networks DvR virtualizes the Layer 3 Gateway functionality enabling this to be distributed to any or every node. Simple to configure and seamless to deploy, DvR avoids unnecessary bandwidth consumption, improves capacity and, especially relevant in the context of high-performance Data Center applications - reduces latency.
- **Extreme Networks Fabric Connect-PIM Gateway.** This feature enables seamless bi-directional interoperability between Fabric Connect and a standards-based PIM Multicast Routing environment. While traditional PIM - Protocol Independent Multicast - is notoriously restrictive, complex, and unstable, it was, unfortunately, the only option if an organization needed to route IP Multicast traffic. Fabric Connect completely changes the Multicast paradigm, making this flexible to plan, simple to deploy, stable to operate. Now, organizations operating a legacy IP Multicast environment - either the PIM-SM or PIM-SSM - can implement Fabric Connect and enjoy seamlessly co-existence pending an eventual transition away from PIM. This feature is flexible, supports high-availability options, and enables organizations to deploy and retire technology at their own pace.
- **VXLAN Gateway.** This feature enables Fabric Connect edge nodes to connect to a Virtual Tunnel End-Point (VTEP) using VXLAN. This capability has a number of diverse uses, including defining connectivity a third party Open vSwitch implementation of VTEP, however, it's probably more likely to be used to deliver simplified, highly available interconnectivity between Fabric Connect domains. Organizations with large-scale Fabric Connect deployments, those encompassing multiple or diverse sites, sometimes prefer to selectively extend services between the domains. With the VXLAN

Gateway capability, it's now possible to leverage simply-to-configure VXLAN provisioning over generic IP services (for example, MPLS) to interconnect the edge nodes of two distinct Fabric Connect domains and thereby seamlessly exchange services.

## Features and Capabilities

- Flexible support for up to 96 ports of 10 Gigabit Ethernet, 24 ports of 40 Gigabit Ethernet or up to 8 ports of 100 Gigabit Ethernet.
- Hot-swappable Ethernet Switch Modules.
- Non-blocking, wire-speed switching architecture.
- Integrated design that is optimized for low latency.
- Flexible table architecture delivers MAC, ARP, and IP Routing scalability.
- Feature-rich support for conventional VLAN, Link Aggregation, Spanning Tree technologies.
- Support for IP Routing techniques including Static, RIP, OSPF, eBGP, BGP+, ECMP, DvR/VRRP, PIM-SM/SSM, and VRF. Additionally, supports Static, RIPng, OSPFv3, ECMP, and VRRP for IPv6 deployments.
- IPv6-optimized Hardware.
- Extreme Networks Switch Cluster technology supports Triangle and Square configurations, with both Layer 2 and Layer 3 functionality.
- Extreme Networks Fabric Connect technology supports L2 Virtual Service Networks (VSNs), Layer 3 Virtual Service Networks, Inter-VSN Routing, IP Shortcut Routing, IP Multicast-over-Fabric Connect and Fabric Connect-PIM Gateway, Fabric Attach Server and Client, and Fabric Extend.
- MACsec and Enhanced Security Mode options.
- High Availability Power and Cooling
  - Up to 2 field-replaceable, hot-swappable AC or DC internal Power Supplies.
  - 4 field-replaceable Fan Modules.

## Warranty

- 12-month hardware.
- A complete range of support options are also available, either directly from Extreme Networks or indirectly from our Authorized Business Partner network.

## Software Licensing

- Base Software License, included with hardware purchase, enables most features with the exception of those specifically noted as enabled by the Premier Software License.
- Premier Software License, an optional accessory, enables the following features: Layer 3 Virtual Service Networks, DvR, VXLAN Gateway, >24 VRFs, and - where local regulations permit - MACsec.

## Country of Origin

China (PRC).

## VSP 8400 Specifications

### General

- Physical Connectivity:
  - Up to 8 x 100GBASE-QSFP28 Ports
  - Up to 24 x 40GBASE-QSFP+ Ports
  - Up to 96 x 10GBASE-SFP+ Ports
  - Up to 96 x 10GBASE-T Ports
  - Up to 96 x 100GBASE-SFP Ports
  - Up to 96 x 100GBASE-T Ports
- Channelization of 40 Gigabit ports
- Switch Fabric Architecture: 2.56Tbps Full-Duplex
- Frame forwarding rate: 1,428Mpps per Switch
- Nominal Latency: <480nsec
- Jumbo Frame support: up to 9,600 Bytes (802.1Q Tagged)
- MACsec support for 10 Gigabit and Channelized 40 Gigabit ports

### Layer 2

- MAC Address: 224,000
- Port-based VLANs: 4,059
- Private VLANs/E-Tree: 4,059
- MSTP Instances: 12
- MLT/LACP Groups: up to 96
- MLT Links per Group: 8
- LACP Links per Group: 8 Active
- Extreme Networks VLACP Instances: up to 96
- Extreme Networks SLPP Instances: 128

## Layer 3 IPv4 Routing Services

- ARP Entries: 32,000
- Static ARP Entries: 2000 per VRF, 10,000 System-wide
- IP Interfaces: 506
- CLIP Interfaces: 64
- IP Routes: up to 15,488
- IP Static Routes: 1,000 per VRF, 5000 System-wide
- RIP Interfaces: 200
- RIP Routes: up to 15,488
- OSPF Interfaces: 500
- OSPF Routes: up to 15,488
- OSPF Areas: 12 per VRF, 80 System-wide
- BGP Peers: 12
- BGP Routes: up to 15,488
- ECMP Groups: 1,000
- ECMP Paths per Group: 8
- NLB Clusters: 200
- VRRP Interfaces: 252
- RSMILT Interfaces: 252
- IPv4 UDP Forwarding Entries: 512
- IPv4 DHCP Relay Forwarding Entries: 1024
- IP Route Policies: 500 per VRF, 5,000 system-wide
- VRF Instances: up to 256

## Layer 3 IPv6 Routing Services

- Neighbors: 8,000
- Static Neighbors: 256
- IP Interfaces: 506
- CLIP Interfaces: 64
- IP Configured Tunnels: 506
- IP Routes: up to 7,488
- IP Static Routes: 1,000
- RIPng Interfaces: 48
- RIPng Routes: up to 7,488
- OSPFv3 Interfaces: 500
- OSPFv3 Routes: up to 7,488
- OSPFv3 Areas: 12 per VRF, 80 System-wide
- ECMP Groups: 1,000
- ECMP Paths per Group: 8
- VRRP Interfaces: 252
- RSMILT Interfaces: 252

## Multicast

- IGMP Interfaces: 4,059
- PIM Active Interfaces: 128
- MLD Interfaces: 4,059
- Static Multicast Routes: 4,000
- BCB IP Multicast S,G Streams: 16,000
- PIM-SSM Static Channels: 4,000
- IP Multicast Streams: 6,000
- IP Multicast Streams (Fabric Connect-PIM Gateway Nodes): 3,000
- Fabric Connect-PIM Gateway Controllers per Region: 5
- Fabric Connect-PIM Gateway Nodes per Region: 64
- Fabric Connect-PIM Gateway Interfaces per BEB Node: 64
- Fabric Connect-PIM Gateway Source Announcements: 6,000

## Fabric Connect

- 802.1aq/RFC 6329 Shortest Path Bridging with Extreme Networks extensions
- MAC Address: 112,000
- NNI Interfaces/Adjacencies: up to 256
- BCB/BEB Nodes per Region: 800

- Transparent UNI Ports/Switch: 96
- BEB Nodes per VSN: 500
- L2 Virtual Service Networks: 4,059
- L3 Virtual Service Networks: up to 256
- IP Shortcut Routes: IPv4 15,488, and IPv6 7,488
- DvR Domains per Region: 16
- DvR-enabled L2 VSNs: up to 502
- DvR Controllers per Domain: 8
- DvR Leafs per Domain: 250
- DvR Interfaces: up to 502
- DvR Routes: up to 32,000
- L2 Multicast Virtual Service Networks: 2,000
- L3 Multicast Virtual Service Networks: 256
- VXLAN Gateway VTEP Destinations per Node: 500
- VXLAN Gateway VNI IDs per Node: 2,000
- Fabric Attach VLAN/VSN Assignments per Port: 94

## QoS and Filtering

- ACL: 256 Ingress and 126 Egress
- IPv4 ACE: 766 Ingress and 252 Egress
- IPv4 ACE: 252 Ingress and 252 Egress
- IPv6 ACE: 256 Ingress
- L2-L4 Ingress Port Rate Limiters: up to 96
- Egress Port Shaper Granularity: 1Mbps to 40Gbps per Port

## Operations and Management

- Mirrored Ports: up to 95
- sFlow: up to 3,000 samples per second
- Fabric RSPAN: up to 1,000 VSN IDs per Region

## Supported Transceivers

### 100 Gigabit Ethernet

- 100GBASE-QSFP28 Passive Copper Direct Attach Cable - 1, 3m, 5m
- 100GBASE-SR4, up to 100m over MMF
- 100GBASE-LR4, up to 10km over SMF

### 40 Gigabit Ethernet

- 40GBASE-QSFP+ Passive Copper Direct Attach Cables - 0.5m, 1m, 3m, 5m
- 40GBASE-QSFP+ Passive Copper Break-Out Cables - 1m, 3m, 5m
- 40GBASE-QSFP+ Active Optical Break-Out Cable - 7m, 10m, 15m
- 40GBASE-QSFP+ Active Optical Direct Attach Cable - 10m
- 40GBASE-LM4 QSFP+, up to 80m over MMF
- 40GBASE-SR4/4x10GBASE-SR QSFP+, up to 150m over MMF
- 40GBASE-LR4 QSFP+, up to 10km over SMF
- 40GBASE-ER4 QSFP+, up to 40km over SMF

### 10 Gigabit Ethernet

- 10GBASE-T, up to 100m over Cat 6a UTP/STP
- 10GBASE-CX, up to 10m over Twinax
- 10GBASE-LRM SFP+, up to 220m over MMF
- 10GBASE-SR/SW SFP+, up to 400m over MMF
- 10GBASE-LR/LW SFP+, up to 10km over SMF
- 10GBASE-BX10 SFP+, up to 10km over SMF
- 10GBASE-ER/EW SFP+, up to 40km over SMF
- 10GBASE-ER CDWM SFP+, up to 40km over SMF
- 10GBASE-ZR/ZW SFP+, up to 70km over SMF
- 10GBASE-ZR CDWM SFP+, up to 70km over SMF

*Note: SFP+ sockets are also capable of supporting a wide range of 1 Gigabit Ethernet Transceivers; additionally, 10 Gigabit Ethernet RJ45 ports also support 100/1000Mbps connectivity. Extreme Networks also supports third party CDWM and DWDM Transceivers in "Forgiving Mode".*

*Please refer to the product documentation for full details and a complete listing of all specifications and compliance.*

# VSP 8400 Series Standards Compliance

The VOSS 6.1 release provides compliance with the following IEEE and IETF standards:

## IEEE

### 802.1 Bridging (Networking) and Network Management

- 802.1D MAC Bridges (a.k.a. Spanning Tree Protocol)
- 802.1p Traffic Class Expediting and Dynamic Multicast Filtering
- 802.1t 802.1D Maintenance
- 802.1w Rapid Reconfiguration of Spanning Tree (RSTP)
- 802.1Q Virtual Local Area Networking (VLAN)
- 802.1s Multiple Spanning Trees (MSTP)
- 802.1v VLAN Classification by Protocol and Port
- 802.1ag Connectivity Fault Management
- 802.1ah Provider Backbone Bridges
- 802.1aq Shortest Path Bridging (SPB) MAC-in-MAC
- 802.1Qbp Equal-Cost Multi-Path (Shortest Path Bridging)
- 802.1X Port-based Network Access Control
- 802.1AB-2005 Station and Media Access Control Connectivity Discovery; aka LLDP (partial support)
- 802.1AE Media Access Control Security
- 802.1AX Link Aggregation

### 802.3 Ethernet

- 802.3-1983 CSMA/CD Ethernet (ISO/IEC 8802-3)
- 802.3i-1990 10Mb/s Operation, 10BASE-T Copper
- 802.3u-1995 100Mb/s Operation, 100BASE-T Copper, with Auto Negotiation
- 802.3x-1997 Full Duplex Operation, including Flow Control
- 802.3z-1998 1000Mb/s Operation, implemented as 1000BASE-X
- 802.3ab-1999 1000Mb/s Operation, 1000BASE-T Copper
- 802.3ae-2002 10Gb/s Operation, implemented as 10GBASE-SFP+
- 802.3an-2006 10Gb/s Operation, 10GBASE-T Copper
- 802.3ba-2010 40Gb/s and 100Gb/s Operation

- 4133 Entity MIB Version 3 (partial support)
- 4213 Basic Transition Mechanisms for IPv6 Hosts and Routers
- 4250 SSH Assigned Numbers
- 4251 SSH Protocol Architecture
- 4252 SSH Authentication Protocol
- 4253 SSH Transport Layer Protocol
- 4254 SSH Connection Protocol
- 4255 DNS to Securely Publish SSH Key Fingerprints
- 4256 Generic Message Exchange Authentication for SSH
- 4291 IPv6 Addressing Architecture
- 4292 IP Forwarding Table MIB
- 4293 IP MIB
- 4301 Security Architecture for IP1
- 4302 IP Authentication Header1
- 4303 IP Encapsulating Security Payload1
- 4308 Cryptographic Suites for IPsec
- 4363 Definitions of Managed Objects for Bridges with Traffic Classes, Multicast Filtering and VLAN Extensions
- 4429 Optimistic DAD for IPv6 (Partial Support)
- 4443 ICMP for IPv6
- 4541 Considerations for IGMP and MLD Snooping Switches
- 4552 Authentication/Confidentiality for OSPFv3
- 4601 PIM-SM: Revised Protocol Specification
- 4607 Source-Specific Multicast for IP
- 4835 Cryptographic Algorithm Implementation Requirements for ESP and AH
- 4861 Neighbor Discovery for IPv6
- 4862 IPv6 Stateless Address Auto-Configuration
- 5095 Deprecation of Type 0 Routing Headers in IPv6
- 5187 OSPFv3 Graceful Restart (Helper-mode)
- 5308 Routing IPv6 with IS-IS
- 5340 OSPF for IPv6
- 5798 VRRPv3 for IPv4 and IPv6
- 6105 IPv6 Router Advertisement Guard
- 6329 IS-IS Extensions supporting IEEE 802.1aq SPB
- 7358 VXLAN: A Framework for Overlaying Virtualized L2 Networks over L3 Networks (partial support)
- 7610 DHCPv6 Shield: Protecting against Rogue DHCPv6 Servers

## Additional Information

For further information about the Extreme Networks Virtual Services Platform 8000 Series and for the complete Extreme Networks portfolio, [www.extremenetworks.com](http://www.extremenetworks.com).

# Ordering Information

| # Managed Devices  |   |
|--|---|
| Part Code  | Description   |
| EC8400*02-E6   | Virtual Services Platform 8404C 4-slot Ethernet Switch, 100G-capable, supporting up to 4 VSP 8400 Series Ethernet Switch Modules. Includes single 800W 100-240V AC Power Supply (no Power Cord), four Fan Modules, and Base Software License. Slide Rack Mount Kit sold separately. |
| EC8400002-E6   | Virtual Services Platform 8404C 4-slot Ethernet Switch, 100G-capable, supporting up to 4 VSP 8400 Series Ethernet Switch Modules. Includes single 800W DC Power Supply, four Fan Modules, and Base Software License. Slide Rack Mount Kit sold separately.                          |
| EC8404009-E6   | 8402CQ 2-port 100GBASE-QSFP28 Ethernet Switch Module for the VSP 8400 Series.<br>(Note: 8402CQ is supported only in the VSP 8404C Chassis, not in the VSP 8400)   |
| EC8404003-E6   | 8408QQ 8-port 40GBASE-QSFP+ Ethernet Switch Module for VSP 8400.<br>(Note: Ports 7 and 8 are reserved for future use).  |
| EC8404005-E6   | 8418XSQ 16-port 10GBASE-SFP+ and 2-port 40GBASE-QSFP+ Combo Ethernet Switch Module for VSP 8400 Series.   |
| EC8404006-E6   | 8418XTQ 16-port 10GBASE-T and 2-port 40GBASE-QSFP+ Combo Ethernet Switch Module for VSP 8400 Series   |
| EC8404001-E6   | 8424XS 24-port 10GBASE-SFP+ Ethernet Switch Module for VSP 8400.  |
| EC8404002-E6   | 8424XT 24-port 10GBASE-T Ethernet Switch Module for VSP 8400.   |
| EC8404007-E6   | 8424GS 24-port 100GBASE-SFP Ethernet Switch Module for VSP 8400.  |
| EC8404008-E6   | 8424GT 24-port 100GBASE-T Ethernet Switch Module for VSP 8400.  |
| EC8005*01-E6   | 800W 100-240V AC Power Supply, for use with the VSP 7200/8000 Series.   |
| EC8005001-E6   | 800W DC Power Supply, for use with the VSP 7200/8000 Series.  |
| 380176   | VSP 8000 Series Premier Software License: enables L3 VSN.   |
| 380177   | VSP 8000 Series Premier Software License: enables L3 VSN and MACsec.  |
| EC8011002-E6   | VSP 8000 Slide Rack Mount Kit (300-900mm).  |
| EC8011003-E6   | VSP 8000 Chassis Power Supply Filler Panel.   |
| EC8011004-E6   | VSP 8000 Chassis Spare Fan Module.  |
| AL2011020-E6   | Extreme Networks DB-9 Female to RJ-45 Console Connector (RED).  |
| AL2011021-E6   | Extreme Networks DB-9 Male to RJ-45 Console Connector (BLUE).   |
| AL2011022-E6   | Extreme Networks RJ-45/DB-9 Integrate Console Cable.  |
| Where applicable the seventh character (*) of the Product Code is replaced to indicate the required product nationalization: |   |
| A  | No Power Cord option.   |
| B  | Includes European "Schuko" Power Cord option, common in Austria, Belgium, Finland, France, Germany, Netherlands, Norway, and Sweden.  |
| C  | Includes Power Cord used in UK and Ireland.   |
| D  | Includes Power Cord used in Japan.  |
| E  | Includes Power Cord used in North America.  |
| F  | Includes Power Cord used in Australia, New Zealand and People's Republic of China.  |

## Notes of product ordering and hardware installation considerations:

- Customers should choose the model number that corresponds with their regional power cord requirements.
- Extreme Networks recommends that Customers purchase a second power supply unit, in order to provide highly available power.
- Extreme Networks recommends that Customers order a Slide Rack Mount Kit with every unit; the 300-900mm kit is designed to fit within most 4-post rack mount systems. Rack mounting with just two post ears would likely cause warping of the rack due to the weight of the unit and is therefore not recommended. Customers are advised to use mounting ears only in conjunction with a supporting shelf.
- A Console Cable is not shipped with the unit and, if required, must be ordered separately.
